■ Life Expectancy and Annuity:

$$E^S [T_x] = \int_0^{\infty} ({}_t p_x^S) dt = \int_0^{\infty} e^{-\lambda_x^S t} dt = \frac{1}{\lambda_x^S} \quad \text{and} \quad E^O [T_x] = \frac{1}{\lambda_x^O}$$

$$\bar{a}_x = \int_0^{\infty} e^{-rt} ({}_t p_x^O) dt = \int_0^{\infty} e^{-rt} e^{-\lambda_x^O t} dt = \frac{1}{r + \lambda_x^O}$$

■ Control Variables and State Evolution:

$\mathcal{G}(w)$ Is the Set of Admissible Strategies (c, π, τ) in the COSOCP and Wealth Evolution is Given by

$$dW(t) = W(t) [r + \pi(t) (\mu - r)] dt + W(t) \pi(t) \sigma dB(t) - c(t) dt$$

The Verification Theorem Reduces the COSOCP to the Variational Inequality:

$$\max \{L^{\text{com}} v(W(t)), g(W(t)) - v(W(t))\} = 0 \quad \text{for } W(t) > 0$$

with

$$L^{\text{com}} v(W(t)) = \sup_{(c, \pi) \in \mathcal{G}^\tau(W(t))} \{f(c(t), W(t)) - \beta^S v(W(t)) + Lv(W(t))\}$$

subject to

$$v(W(t)) = g(W(t)) \quad \text{for all } W(t) \in \partial D$$

and

$$v_W(W(t)) = g_W(W(t)) \quad \text{for all } W(t) \in \partial D.$$

Indirect Utility Function with Exponential Mortality:

$$E^w \left[\int_0^{\tau} e^{-\beta_x^S t} \{U_1(c(t)) + \lambda_x^S \eta U_3(W(t) + Z^s)\} dt \right. \\ \left. + e^{-\beta_x^S \tau} \frac{1}{\beta_x^S} \{U_2(W(\tau)(r + \lambda_x^O)) + \lambda_x^S \eta U_3(Z^s)\} \right]$$

→ Calculate $L^{\text{com}}_g(W(t))$ to Determine the Set U

→ Infer Information from U on the Continuation Region D

Derivation of the Set U - Power Utility

Assuming Power Utility Functions We Obtain

$$L^{\text{com}}_g(W(t)) = \frac{W(t)^{1-\gamma}}{1-\gamma} \left[\gamma K_0^{-\frac{1-\gamma}{\gamma}} - \gamma K_0 K_2^{-1} \right] + \frac{\lambda^S \eta}{1-\gamma} \left[(W(t) + Z^S)^{1-\gamma} - (Z^S)^{1-\gamma} \right]$$

with the Constants

$$K_0 = \frac{(r + \lambda^O)^{1-\gamma}}{\beta^S} > 0,$$

$$K_2 = \frac{\gamma}{\beta^S - (1-\gamma) \left(r + \frac{\kappa}{\gamma} \right)}$$

$$\kappa = \frac{1}{2} \left(\frac{\mu - r}{\sigma} \right)^2 > 0.$$

- Second Order Derivative

$$\tilde{u}_{yy}(y(t)) = -I_y(y(t)) = -\frac{1}{u_{WW}(I(y(t)))} > 0$$

→ Strict Convexity of the Dual Function \tilde{u} Follows From the Strict Concavity of the Primal Function u .

- Lastly, We Have

$$u(W^*(t)) = \tilde{u}(y(t)) + y(t)W^*(t) = \tilde{u}(y(t)) - \tilde{u}_y(y(t))y(t)$$
